

MAXIMIZING YOUR HARVEST WITH APPLIED HOLOGENOMICS

PLANT¹ HOLOGENOMICS

Fertilizer enhanced with BiOWiSH® Crop Liquid is soil applied, creating a high-performance partnership between the plant and BiOWiSH microorganisms. This supports the plant's natural ability to nurture native soil biology and resist environmental stress.

HOLOGENE³ TECHNOLOGY

SOIL² MICROBIOME

Root growth and exudate production drives the proliferation of Plant Growth Promoting Bacteria (PGPB) in the root zone, improving the functional diversity of the soil.

SOIL³ PROPERTIES

At the same time, the plant's production of beneficial root exudates and enhancement of native microbial activity in the soil promotes soil quality and nutrient cycling.
